

SPARKLIKE CARE™

Insulating glass manufacturers want to assure that their production is controlled, and that they deliver the best quality products to customers. The quality operators take regular measurement to check the insulating gas concentration.

The operators need to trust the reading, and in order to give them sense of security, we recommend to calibrate Sparklike devices annually.

GET NEW

SPARKLIKE CARE™ **FOR GUARANTEED ACCURACY**

Sparklike CARE™ allows you to save on costs, gain extended product life, obtain reliable gas measurement results and plan your calibration needs to fit manufacturing seasonalities. With Sparklike CARE™, Sparklike professionals will take care all calibration and maintenance needs for you.

The idea behind Sparklike CARE™ came from Sparklike customers. Glass manufacturers were looking to streamline their quality process in a way that was foreseeable and controlled. In addition, they were looking to extend mileage for their analyzer and gain cost savings from transport. Pick-up and delivery service was included to make the process as easy as possible.

SPARKLIKE CARE™ FEATURES INCLUDED IN THE YEARLY FEE:

NEW

NEW

NEW

- Maintenance of the most common wear and tear parts such as battery, optical filters, optical fibre, etc.
- Calibration to argon and/or krypton as well as calibration certificate
- Pick-up and return of the service
- Reminder message one month prior to the need of the calibration
- Testing the analyzer at Sparklike testing laboratory
